The brain is an organ that serves as the center of the nervous system in all vertebrate and most invertebrate animals. The brain is located in the head, usually close to the sensory organs for senses such as vision. The brain is the most complex organ in a vertebrate's body. In a human, the cerebral cortex contains approximately 14–16 billion neurons, and the estimated number of neurons in ...

Brain - Wikipedia

The previous chapter describes seven principles that support learning with understanding. This chapter explores the implications of those principles for the intentional and systemic design of four key elements of the educational system—curriculum, instruction, assessment, and professional development—to promote learning with understanding within the context of advanced study.

7. Designing Curriculum, Instruction, Assessment, and ...

Chapter 10 - Respiratory System STRUCTURE AND FUNCTION. Morton Lippmann. The respiratory system extends from the breathing zone just outside of the nose and mouth through the conductive airways in the head and thorax to the alveoli, where respiratory gas exchange takes place between the alveoli and the capillary blood flowing around them.

Chapter 10 - Respiratory System

The Krebs cycle generates only two ATP molecules per glucose molecule. This is because, when glucose is broken down in glycolysis to produce two molecules of pyruvate, and each pyruvate molecule is carboxylated into an acetyl, each acetyl group goes through Krebs cycle only once, and produces one ATP molecule as a result.
