HEALTH, SAFETY & ENVIRONMENTAL HANDBOOK

The environment is an area that the shell builds every time that it starts a session that contains variables that define system properties. In this guide, we will discuss how to interact with the environment and read or set environmental and shell variables interactively and through configuration files.

How To Read and Set Environmental and Shell Variables on a ...

Environment variables allow storage of global settings for the shell or various other programs called. They are contextual (each process has its own set of environment variables) but inheritable. This last characteristic offers the possibility for a login shell to declare variables which will be passed down to all programs it executes.

8.6. Shell Environment - The Debian Administrator's Handbook

1.2. Environment variables¶ These environment variables influence Python's behavior, they are processed before the command-line switches other than -E or -I. It is customary that command-line switches override environmental variables where there is a conflict. PYTHONHOME¶ Change the location of the standard Python libraries.

UEFI Shell Specification

Our commitment and policy reflects the integrated way we work across Shell in the areas of health, security, safety, the environment (HSSE) and social performance (SP). All Shell companies, contractors and joint ventures under our operational control must manage HSSE and SP in line with the commitment and policy. Commitment

HSSE and social performance - commitment and policy - Shell

A shell variable is a memory storage area that can be used to hold a value, which can then be used by any built-in shell command within a single shell. An environment variable is a shell variable that has been exported or published to the environment by a shell command so that shells and shell scripts executed below the parent shell also have access to the variable.

Understanding Unix shells and environment variables

Given a Nix expression that describes the dependencies of your package, the command nix-shell will build or download those dependencies if they're not already in your Nix store, and then start a Bash shell in which all necessary environment variables (such as compiler search paths) are set.
